

A KEYNOTE FOR LEADERS IMPLEMENTING AI

THE LAST MILE OF AI

**Human Process. Machine Execution.
Real-World Results.**

Most AI initiatives do not fail because the model cannot do the work. They fail because the files are not ready, the process lives in people's heads, the output does not fit the workflow, or the next person cannot use it. This practical keynote shows leaders how to close the gap between machine capability and human usefulness - so AI moves from an impressive pilot to a useful system.

Most attention goes to the middle. Most value is won or lost before and after.

✓ WHAT THIS SESSION EXPLORES

- Why a powerful tool is not the same as a useful system
- How human process shapes machine performance
- The work before AI, during AI, and after AI
- How to build for the next person - not just the builder
- What turns a promising pilot into a repeatable operating practice

AI IDEAL FOR

AI and technology conferences; corporate leadership teams; innovation and digital transformation events; operations and workforce programs; industry associations; and organizations ready to move beyond introductory AI.
